

Picture Guide for Assembling your Giant short-faced bear and Mammoth

Make sure you have adult supervision while completing this activity!

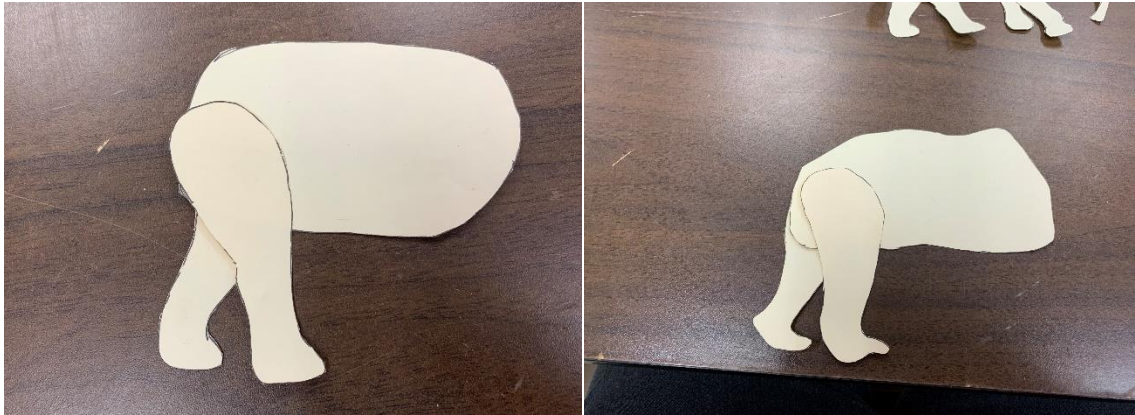

1. Here are the main pieces you should have. You may also have extra ear pieces.

2. Next, attach the first back leg to the body. As pictured it should go behind the body. A glue stick, tape, or brass fastener works best.

3. Attach the second hind leg to the front of the body.

4. Attach the first fore leg to the body. It should go behind the body.

5. Attach the second front leg.

6. Attach the head to the body. For the bear, tape works best for this step because the head is designed to line up with the body.

7. Last, attach the extra pieces. For the bear, it is an ear. For the mammoth, it is an ear, a tail, and tusks. Don't forget to read the handout included for more information about how these animals lived!

Feel free to color your animals!
